

## subdividing watersheds in tutorial for KINEROS model

Posted by Mallo - 2008/09/10 21:22

---

I am going through the tutorial for Introduction for AGWA2, and having problems with subdividing the watershed step in the KINEROS modeling. I followed the same steps as the SWAT model, but the result is definitely not correct. I've attached an image of the result. Any ideas?

What seems to be the problem with the results? The image wasn't attached in your post so I can't see the problem. When attaching an image make sure it is below the maximum width x height and size (549x599 - 50 KB). If you want to attach a larger image, which you probably should, attach it as a zip file instead of an image.
